# Today's Agenda

Evaluating simple OLS regressions

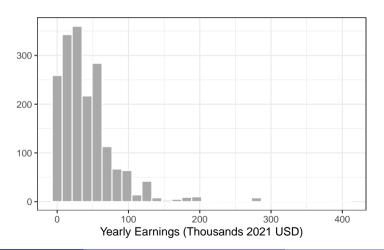

Justin Leinaweaver (Spring 2022)

# For Today

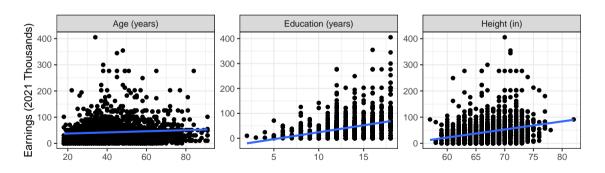

Finish the model building work from class today

Use the four steps outlined in Wilson, Keating, and Beal-Hodges (2012) chapters 4 and 5 to evaluate the fit of our models of earnings.

# Can we build a useful model of yearly earnings in the Ross (1990) dataset?

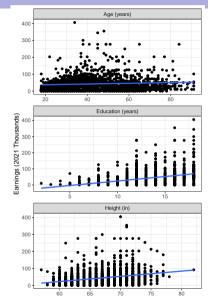

# Can we build a useful model of yearly earnings in the Ross (1990) dataset?

		Earnings (2021)	
	(1)	(2)	(3)
Height	3.08* (0.25)		
Age		0.22* (0.06)	
Education			5.57* (0.36)
Constant	$-162.54^{*} \ (16.46)$	33.17* (2.64)	-31.34* (4.89)
Observations Adjusted R <sup>2</sup>	1,815 0.08	1,815 0.01	1,813 0.11
Residual Std. Error F Statistic	40.28 (df = 1813) 155.52* (df = 1; 1813)	41.81 (df = 1813) 14.22* (df = 1; 1813)	39.50 (df = 1811) 235.79* (df = 1; 1811

Note:

	Earnings (2021)		
	(1)	(2)	(3)
Height	3.08* (0.25)		
Age		0.22* (0.06)	
Education			5.57* (0.36)
Constant	-162.54* (16.46)	33.17* (2.64)	-31.34* (4.89)
Note:			*p < 0.05

# What are the predicted earnings...

For someone of average height in the sample?

Avg height of 66.6 = \$42.6k

For someone of average age in the sample?

• Avg age of 42.9 = \$42.6k

For someone of average education in the sample?

Avg education of 13.2 = \$42.2k

# What are the predicted earnings...

Model 1: Height

Avg = \$42.6k vs Maximum (82) = ?

Model 2: Age

• Avg = 42.6k vs Maximum (91) = ?

Model 3: Education

• Avg = 42.2k vs Maximum (18) = ?

# What are the predicted earnings...

Model 1: Height

• Avg = 42.6k vs Maximum (82) = 90k

Model 2: Age

• Avg = 42.6k vs Maximum (91) = 53.2k

Model 3: Education

• Avg = 42.2k vs Maximum (18) = 68.9k

		Earnings (2021)	
	(1)	(2)	(3)
Height	3.08* (0.25)		
Age		0.22* (0.06)	
Education			5.57* (0.36)
Constant	$-162.54^{*} \ (16.46)$	33.17* (2.64)	-31.34* (4.89)
Observations Adjusted R <sup>2</sup>	1,815 0.08	1,815 0.01	1,813 0.11
Residual Std. Error F Statistic	40.28 (df = 1813) 155.52* (df = 1; 1813)	41.81 (df = 1813) 14.22* (df = 1; 1813)	39.50 (df = 1811) 235.79* (df = 1; 1811

Note:

	Earnings (2021)
Education	5.57*
	(0.36)
Constant	-31.34*
	(4.89)
Observations	1,813
Adjusted R <sup>2</sup>	0.11
Residual Std. Error	$39.50 \; (df = 1811)$
F Statistic	235.79* (df = 1; 1811)
Note:	*p < 0.05

	Earnings (2021)
Education	5.57*
	(0.36)
Constant	-31.34*
	(4.89)
Observations	1,813
Adjusted R <sup>2</sup>	0.11
Residual Std. Error	39.50 (df = 1811)
F Statistic	235.79* (df = 1; 1811)
Note:	*n < 0.05

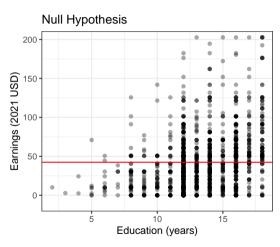

Alternative Hypothesis  $(H_A)$ 

 Higher levels of education are associated with larger incomes.

Null Hypothesis  $(H_0)$ 

 Level of education is not associated with income.

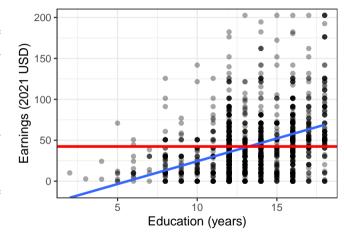

# P-Values: A shortcut to determining statistical significance

"The p-value is the probability of observing another computed test statistic ... that is more extreme (either positive or negative) than the one computed for your sample. ... Therefore, the smaller the p-value, the more support for the alternative hypothesis" (p82).

	Earnings (2021)
Education	5.57*
	(0.36)
Constant	-31.34*
Constant	(4.89)
Observations	1,813
Adjusted R <sup>2</sup>	0.11
Residual Std. Error	39.50 (df = 1811)
F Statistic	235.79* (df = 1; 1811)
Note:	*p < 0.05

Earnings (2021)
3.01
(2.26)
37.17*
(4.07)
1,814
0.0004
41.97 (df = 1812)
1.77  (df = 1; 1812)
*p < 0.05

	Earnings (2021)
Non-Smoker	3.01
	(2.26)
Constant	37.17*
	(4.07)
Observations	1.814
Adjusted R <sup>2</sup>	0.0004
Residual Std. Error	41.97 (df = 1812)
F Statistic	1.77  (df = 1; 1812)
Note:	*p < 0.05

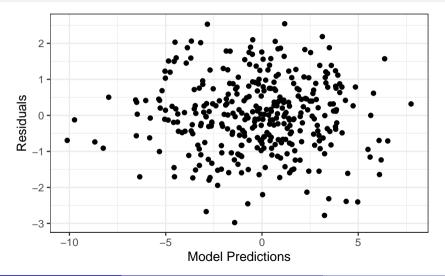

#### Alternative vs the Null Hypothesis

		Earnings (2021)	
	(1)	(2)	(3)
Height	3.08* (0.25)		
Age		0.22* (0.06)	
Education			5.57* (0.36)
Constant	$-162.54^{*} \ (16.46)$	33.17* (2.64)	-31.34* (4.89)
Observations Adjusted R <sup>2</sup>	1,815 0.08	1,815 0.01	1,813 0.11
Residual Std. Error F Statistic	40.28 (df = 1813) 155.52* (df = 1; 1813)	41.81 (df = 1813) 14.22* (df = 1; 1813)	39.50 (df = 1811) 235.79* (df = 1; 1811

Note:

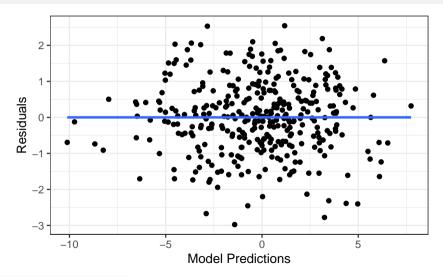

# Step 4: Include a plot of the model's residuals

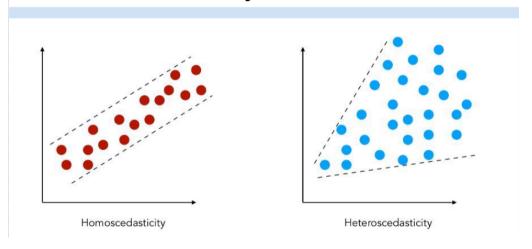

#### **Step 4: Plot the Model's Residuals x Predictions**

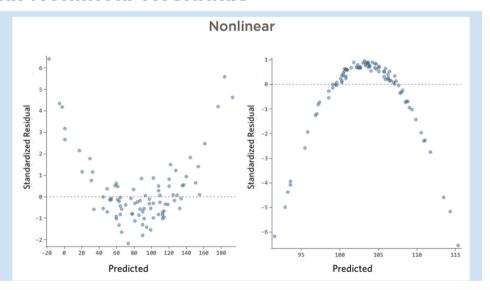

# **Step 4 Goal: Homoscedastic Errors**

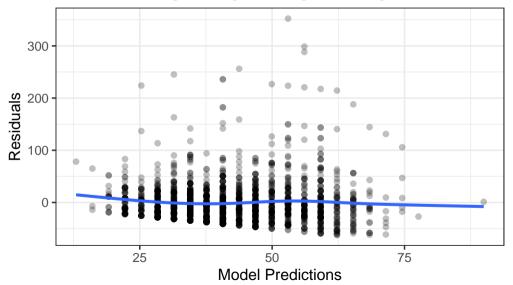

### **Bad: Heteroscedasticity**

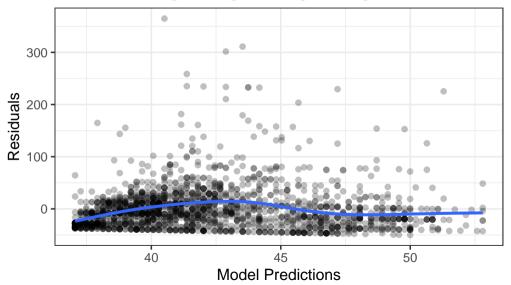

#### **Bad: Nonlinear Residuals**

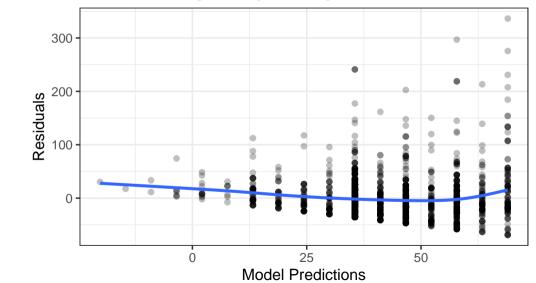

#### Residuals: Regressing Earnings on Height

#### Residuals: Regressing Earnings on Age

#### Residuals: Regressing Earnings on Education

	Earnings (2021)		
	(1)	(2)	(3)
Height	3.08* (0.25)		
Age		0.22* (0.06)	
Education			5.57* (0.36)
Constant	$-162.54^{*}$ (16.46)	33.17* (2.64)	-31.34* (4.89)
Observations Adjusted R <sup>2</sup>	1,815 0.08	1,815 0.01	1,813 0.11
Residual Std. Error F Statistic	40.28 (df = 1813) 155.52* (df = 1; 1813)	$41.81 (df = 1813)$ $14.22^* (df = 1; 1813)$	39.50 (df = 1811) 235.79* (df = 1; 1811)

Note:

# Which is a better model of personal income (earnk):

- Mother's education level, or
- Personal exercise

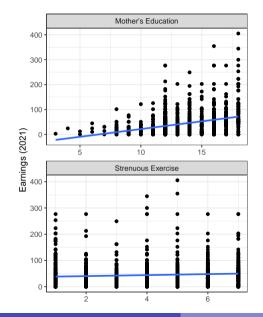

Which is a better model of personal income (earnk):

- Mother's education level, or
- Personal exercise

Step 1: Fit and evaluate both models

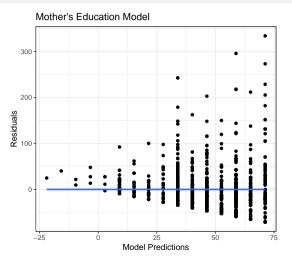

Scatterplots, regression tables and residuals plots

	Earnings (2021)	
	(1)	(2)
Mother's Education	6.21*	
	(0.43)	
Exercise		1.88*
		(0.42)
Constant	-40.64*	36.69*
	(5.87)	(1.62)
Observations	1,570	1,815
Adjusted R <sup>2</sup>	0.12	0.01
Residual Std. Error	40.45 (df = 1568)	41.75 (df = 1813)
F Statistic	212.09* (df = 1; 1568)	$19.83^* (df = 1; 1813)$
Note:		*p < 0.05

	Earnings (2021)	
	(1)	(2)
Mother's Education	6.21* (0.43)	
Exercise		1.88* (0.42)
Constant	-40.64* (5.87)	36.69* (1.62)
Observations Adjusted R <sup>2</sup>	1,570 0.12	1,815 0.01
Note:	*	p < 0.05

# **Step 4 - Check the Residuals**

# **Step 2: Make four predictions**

#### Mother's Education Model

- Mother completed high school (12)
- Mother completed college (16)

#### Strenuous Exercise Model

- No strenuous exercise (1)
- Strenuous exercise > 3x per week (7)

# **Step 2: Make four predictions**

#### Mother's Education Model

- Mother completed high school (12) = \$33.9k
- Mother completed college (16) = \$58.7k

#### Strenuous Exercise Model

- No strenuous exercise (1) = \$38.6k
- Strenuous exercise > 3x per week (7) = \$49.8k

# For Tuesday

Use chapter 5 of the textbook to add confidence intervals to our four model predictions.
